

Iman Haamid

Deep Learning & AI Specialization

Building **Multi-Agent Systems** and **Financial Intelligence** tools via advanced neural architectures.

<> github.com/imid12/AI-Portfolio-Iman-Haamid

Learning Journey

Foundations

Tensor manipulation, env management, and version control. PyTorch and TensorFlow/Keras

Neural Networks

Explored CNNs, RNNs, and Transformers, implementing custom architectures from scratch.

Specialization

Focused on Multi-Agent Reinforcement Learning and advanced Financial Intelligence modeling.

Deployment

Scaling models using distributed systems and optimizing for high-frequency financial data environments.

Featured Projects

Financial AI Systems

Advanced predictive modeling for high-frequency trading environments. Architected multi-agent reinforcement learning frameworks to optimize portfolio distribution and risk assessment.

CrewAI Python LSTM

RAG Intelligence

Developing sophisticated Retrieval-Augmented Generation (RAG) pipelines for complex knowledge retrieval. Leveraging Transformer architectures to synthesize insights from massive unstructured financial datasets.

ChromaDB LangGraph RAG

Skills & Competencies

Deep Learning

TensorFlow / PyTorch

NLP & Transformers

BERT, GPT-architecture
expertise

Agentic AI

CrewAI & LangGraph

Data Science

Time-Series Forecasting

Knowledge Retrieval

Vector DBs (Chroma)

Reflection & Future

Current Impact

Synthesizing multi-agent frameworks and RAG pipelines to redefine financial decision-making with high-fidelity predictive modeling.

Growth Areas

Deepening expertise in on-device LLM optimization and exploring decentralized AI protocols for secure financial environments.

The Vision

To architect autonomous, ethical AI ecosystems that bridge the gap between massive unstructured data and actionable institutional intelligence, ensuring robust performance in volatile markets.
